

Fundsmith Equity Fund

Short Form Report

For the six months ended 30 June 2024 (unaudited)

Profile of the Fund

Investment objective and policy

The investment objective of the Fundsmith Equity Fund (the “Fund”) is to achieve long-term growth (over 5 years) in value.

The Fund will invest in equities on a global basis. The Fund’s approach is to be a long-term investor in its chosen stocks. It will not adopt short-term trading strategies.

The Fund has stringent investment criteria which the Authorised Corporate Director (ACD) and the appointed investment manager adhere to in selecting securities for the Fund’s investment portfolio. These criteria aim to ensure that the Fund invests in businesses:

- that can sustain a high return on operating capital employed;
- whose advantages are difficult to replicate;
- which do not require significant leverage to generate returns;
- with a high degree of certainty of growth from reinvestment of their cash flows at high rates of return;
- that are resilient to change, particularly technological innovation; and
- whose valuation is considered by the Fund to be attractive.

Risk profile

The Fund has no exposure to derivatives and no borrowings. Further, the investments are all in large publicly quoted companies where there is significant liquidity in the stock. The principal risk factor is the market price of the securities held by the Fund which is kept under review in light of the Fund’s objective.

Currency risk: The Fund’s portfolio is a global share portfolio and many of the investments are not denominated in sterling. There is no currency hedging in place and the price of shares in the Fund may therefore rise or fall purely on account of exchange rate movements.

Concentration risk: The investment criteria adopted by the Fund significantly limits the number of potential investments. The Fund generally holds 20 to 30 stocks and so it is more concentrated than many other funds. This means that the performance of a single stock within the portfolio has a greater effect on the price of the shares of the Fund.

Operational risk: Failures or delays in operational processes may negatively affect the Fund. There is a risk that any company responsible for the safekeeping of the assets of the Fund may fail to do so properly or may become insolvent, which could cause loss to the Fund.

Risk warning

Any stock market investment involves risk. These risk factors are contained in the full Prospectus. Investors should be aware that the price of shares and the income from them can fall as well as rise and investors may not receive back the full amount invested. Past performance is not a guide to future performance.

Risk and reward profile

The risk category reflects the significance of the Fund’s share price fluctuations based on historical data. Historical data may not be a reliable indication of the future risk profile of the Fund. The risk category of the Fund is not guaranteed and may change over time. Further, the lowest category of risk does not mean risk free.

Generally, the higher the risk category, the greater the potential for higher returns but also the higher the risk of losing money. This fund is ranked at 5 because funds of this type have experienced medium to high rises and falls in value in the past. The underlying investments are, however, in large companies with shares that are, in most cases, highly liquid.

There are a number of other risks that are not covered by the indicator above. A full description is contained in the prospectus under the heading “Risk Factors”. The most material are currency risk, concentration risk and operational risk which are explained above.

Investment Manager's review

July 2024

Dear Fellow Investor,

The table below shows the performance of the Fundsmith Equity Fund ('Fund') and other comparators during the first half of 2024 and since inception.

% Total Return	1st Jan to 30th June 2024	Inception to 30th June 2024	
		Cumulative	Annualised
Fundsmith Equity Fund¹	+9.3	+610.2	+15.4
Equities ²	+12.7	+369.6	+12.0
UK Bonds ³	-2.2	+23.7	+1.6
Cash ⁴	+2.6	+15.6	+1.1

The Fund is not managed with reference to any benchmark, the above comparators are provided for information purposes only.

¹T Class Accumulation shares, net of fees priced at midday UK time, source: Bloomberg.

²MSCI World Index, £ Net, priced at close of business US time, source: www.msci.com.

³Bloomberg Series-E UK Govt 5-10 yr Bond Index, source: Bloomberg.

⁴£ Interest Rate, source: Bloomberg.

Our Fund was up by 9.3% in the first six months of the year, 3.4 percentage points less than what is perhaps the most obvious comparator – the MSCI World Index (£ net).

An increase in value of 9% in a year would be in line with the long-term average for equities, so 9% in a half year would normally be cause for celebration except of course that it is less than the Index.

Part of the problem is that returns have been concentrated in a very few stocks. The S&P 500 Index in GBP returned 17% over the period and just five companies – Amazon, Apple, Meta, Microsoft and Nvidia – were responsible for 46% of the returns. 25% of the returns came from Nvidia alone.

We own three of those five stocks – Apple, Meta and Microsoft – although our Apple stake remains small as we wait patiently for the stock price to reflect the company's current trading. However, we do not own any Nvidia as we have yet to convince ourselves that its outlook is as predictable as we seek.

Without owning this stock, and indeed the whole five in at least an index weighting, outperformance was difficult to attain.

What did well for us in the first six months of 2024?

Here are the five biggest positive contributors to performance:

Stock	Attribution
Novo Nordisk	+3.4%
Meta Platforms	+2.7%
Microsoft	+2.0%
Alphabet	+1.0%
Stryker	+0.8%

Source: State Street.

As ever, we continue to make money with old friends.

Investment Manager's review (continued)

The five biggest detractors from our Fund's performance during the period were:

Stock	Attribution
L'Oréal	-0.7%
IDEXX	-0.6%
Nike	-0.6%
Brown-Forman	-0.5%
Waters	-0.5%

Source: State Street.

A downturn in pet owners visits to vets after the pandemic splurge and troubles in the Chinese economy account for most of the problems and leave us with little concern over the longer term outlook for most of these companies. In at least one case the problem is probably not the business but the management.

We prefer not to update the valuation at this stage of the year as although share prices are certain, the free cash flow ('FCF') on which we base our valuation has elements of seasonality so we will leave it until the year end to update the portfolio valuation.

Our portfolio turnover in the first half was 3.7%. Voluntary dealing (dealing not caused by redemptions or subscriptions) cost £693,032 during the half year (0.003% or 0.3 of a basis point).

The Ongoing Charges Figure for the T Class Accumulation shares was 1.04% and with the cost of all dealing added, the Total Cost of Investment was 1.05%.

During the period we began accumulating stakes in Texas Instruments, the manufacturer of analogue and embedded semiconductors and in April we began buying a new position for the fund, the name of which will be revealed when we have accumulated our desired weighting.

We continue to invest with the aim of long-term superior performance adjusted for risk.

Yours sincerely,

Terry Smith
