### SUB-FUND SUITABILITY

#### WHO IS THE SUB-FUND SUITABLE FOR?

-The ILP Sub-Fund may be suitable for investors who are more concerned with maximising long term returns than minimising possible short term losses. Investors should also understand the risks of investing in Equities or equity-related securities of companies worldwide.

-It is important to remember that, as with most investments, the value of your investments are not guaranteed and can go down as well as up. Therefore we suggest that you only invest money that can be committed for the medium to long term. You should also bear in mind that securities held within a Fund may not be denominated in the currency of that Fund, so unit prices may fall purely on account of exchange rate fluctuations.

-Please note that Friends Provident International Limited (“FPIL”) investment products are intended for medium to long term investment and are not therefore designed for early surrender. If you do surrender early, a product surrender charge may be applied. Please note that the earlier you terminate your plan, the more you may lose.

**Liquidity Risks**

**Liquidity risk:** In general the Fund manages its investments, including cash, such that it can meet its liabilities for the redemption of any shares that investors wish to sell. Investments held may need to be sold if insufficient cash is available to finance such redemptions.

-If the size of the disposals is sufficiently large, or the market is illiquid, then there is a risk that either the investments might not be sold or the price at which they are sold may adversely affect the Net Asset Value of the Fund.

**Product-Specific Risks**

**Chinese Market risk:** Investing in Emerging Markets such as the PRC subjects the Sub-Fund to a higher level of market risk than investments in a developed country. This is due to, among other things, greater market volatility, lower trading volume, political and economic instability, settlement risk, greater risk of market shut down and more governmental limitations on foreign investment than those typically found in developed markets.

**Financial Derivative Instruments risk:** The use of Financial Derivative Instruments may give rise to Leverage, liquidity, counterparty and valuation risks at times. Given the Leverage effect embedded in derivatives, such investments may result in higher volatility or a significant loss in the Fund's assets within a short period of time.

**Equity risk:** The value of stocks may fluctuate, sometimes dramatically, in response to the activities and results of individual companies or because of general market and economic conditions or other events, including changes in investment sentiment, political and issuer-specific factors.

**WHAT ARE THE FEES AND CHARGES OF THIS INVESTMENT?**

S\$0.93	x 100,000	= S\$93,000
